COMMISSIONING

WHO CAN YOU TRUST TO COMMISSION YOUR NEW NETWORK?

Commissioning is the final, critical stage before your radio network goes live. Choosing not to have it professionally commissioned may result in unnecessary risk, delay and budget overruns. Can your organization absorb the cost of delaying the return on your communications investment, and the risk of outages post-handover?

When your network goes live, your business and your people depend upon your radio communications. You need confidence that every network element is optimized, installed, tested and operating to its maximum potential.

To realise the benefits of a communications solution – whether a new solution or an upgrade and expansion – professional commissioning by Tait experts can take care of scheduling, budget, safety and quality control requirements.

Let the experts who are designing and building your system manage the critical commissioning for you.

WHAT DOES COMMISSIONING INVOLVE?

Working alongside your team, Tait will coordinate, manage and lead your organization through each commissioning phase.

Planning and scheduling

A Tait commissioning specialist will work with you to develop a commissioning plan that delivers the most time-efficient and cost-effective outcomes for your business.

Test pre-planning

Test methodologies, scope and responsibilities are clearly defined for full visibility and clarity over timing of activities and deliverables.

Test execution

A formalized testing process identifies and resolves unforeseen deployment and installation issues, testing each aspect of your network, including interfaces to other communication technologies.

Acceptance and handover

With the commissioning completed, the comprehensive test results provide verification that your new network is now ready for full operation.

System overview

Tait experts provide an overview of your new network and identify training requirements to support your operators as they become familiar with the system functions and operation.

WHAT DOES COMMISSIONING DELIVER?

Time and cost saving

Uncertainty and operational complexity at the point of implementation can add time and cost to your communications solution deployment. With decades of radio communications expertise in your industry, Tait experts will deliver a planned, secure, seamless handover.

Risk minimized and quality guaranteed

At the critical “go live” stage, Tait experts can guarantee your communications readiness by providing on-the-spot troubleshooting and expert backup.

Worker Safety

A formalised testing schedule that focuses on voice and data communications performance, dependability and operational certainty ensures that your Tait-commissioned solution won't let your people down.

Tait offers a range of radio communications services in three portfolios:

DESIGN

Technologies, tools and ideas to predict, plan, identify and customize a communications solution that guarantees the right fit. Tait Design services include

- Customization,
- System Design,
- Network Migration Planning.

DEPLOY

The expertise to integrate and upgrade your radio solution, achieving seamless, streamlined and trouble-free implementation. Tait Deploy services include:

- Project Management,
- Technical Training,
- System Documentation.

SUPPORT

Continued, ongoing assurance and expert support for your equipment – and your people – for the life of your network. Tait Support services include:

- Health Check,
- Extended Product Warranty,
- Support Agreement.
